TORCH 2016 - An independent scientific evaluation of the health-related effects of the Chernobyl nuclear disaster

Global 2000/Friends of the Earth Austria, Vienna City Council Environmental Ombuds Office - Ian Fairlie

The report updates the new health evidence which has been published in peer-reviewed journals during the 10 year period 2006-2016. In a nutshell, the report finds: 5 million people in Belarus, Ukraine and Russia still live in highly contaminated areas; 400 million people in less contaminated areas; 37% of Chernobyl's fallout deposited on western Europe; 42% of western Europe contaminated; 40,000 fatal cancers predicted; 6,000 thyroid cancer cases to date, 16,000 more expected; increased radiogenic thyroid cancers now seen in Austria; increased radiogenic leukemia, cardiovascular disease, breast cancers confirmed; new evidence of radiogenic birth defects, mental health effects and diabetes; new evidence that children in contaminated areas suffer radiogenic illnesses
