Nuclear scars - The lasting legacies of Chernobyl and Fukushima

Greenpeace - Alexandra Dawe, Justin McKeating, Iryna Labunska, Nina Schulz, Shawn-Patrick Stensil and Rianne Teule

It is 30 years since the beginning of the Chernobyl nuclear disaster. It is also five years since the Fukushima disaster began. To mark these anniversaries, Greenpeace has commissioned substantial reviews of scientific studies examining the continued radioactive contamination in the affected areas, and the health and social effects on the impacted populations. We have also carried out radiation field work to expose the unrelenting crises in Russia, Belarus, Ukraine and Japan that thousands of people still live with on a daily basis.
